

VANTAGE

Easy-to-use data analysis app for sailing performance insights

The Vantage App automates your post-sail data analysis, delivering precise insights in a matter of seconds. Understanding your data has never been easier, with a simple and intuitive interface that gives you the insights you need to improve your performance on the water. Vantage processes data from major sailing instrument suppliers, including Vakaros, Sailmon and Garmin. The app supports a selection of foilers, dinghies and small keelboats, with more classes to be supported in the future.

Automatic Wind Detection

Vantage uses algorithms to infer wind direction throughout a session, even capable of adjusting for minor shifts. Get accurate performance numbers without the need for a wind sensor.

A Digital Training Diary

Log your equipment, trim settings, and make your note taking digital. Look back at your past sessions with ease and review your performance trends over time.

Data Comparison - Simplified

With Vantage, sharing and comparing data with your peers has never been easier. When users have sailed together, they can compare data with just a click.

Developed by Sailors

Vantage has been developed in conjunction with world-leading athletes and coaches, with over 250+ sailors enrolled in beta testing.

“It does everything you need for a sailing tool”

- Dylan Fletcher-Scott

Olympic Champion, SailGP and America's Cup helmsman

“I'm very impressed by the simplicity and accuracy of Vantage”

- Diego Botin

Olympic Champion, SailGP Champion

Available on Google Play and App Store in early March
