

# Velocitek Prism

Digital Magnetic Compass for All Dinghy Classes

The Prism is a stripped-down racing compass. Class legal anywhere an electronic compass is legal, the Prism provides superior accuracy, and a massive display all in an ultralight, compact package.

## LIGHTWEIGHT

At a mere 137 g (4.8 oz) it is the world's lightest racing compass.

## MASSIVE DIGITS

The Prism's sunlight-readable, high-contrast LCD screen features 29.8mm (1.1") tall digits in a font that's optimised for readability. This means that if your boat's under 40ft long you'll be able to mount the Prism on your mast and read it easily from anywhere in the cockpit, even if you don't have perfect vision.

## ULTRA-WIDE VIEWING ANGLE

With 250° of visibility the Prism's LCD's can be easily read from the helm to the trapeze wire.

## FLEXIBLE & SECURE MOUNTING

The Prism mounts to your boat via the slide-in cradle. The Prism Cradle can be mounted to a wide array of brackets, directly to a mast using the centreline holes and the Mast Bracket Hardware Kit, or directly to a bulkhead. We even included recesses in the cradle in case you need to lash your compass in place.
