

Velocitek ProStart

Start like a Pro with GPS Distance to Line Technology

The Best Just Got Better

Sailing World called the Classic ProStart "Possibly the greatest electronic racing gadget of this decade", and Practical Sailor gave it their prestigious Editor's Choice award. Now we've taken this legendary product to the next level with some major upgrades.

Highly Visible in All Conditions

A bonded Gorilla® Glass display with razor sharp white on black digits shows up crystal clear through your favourite polarized sunglasses. A user selectable white / red LED backlight takes care of night sailing or other low light situations.

Zero-Latency Aerospace-Grade Navigation

A powerful 72 channel, 25Hz multi-constellation GPS receiver combined with a 100Hz solid-state 6-axis inertial measurement unit (IMU) and a patented high-precision 3-axis geomagnetic sensor gives you accurate distance, speed and heading information with zero lag time.

75-Hour Li-Ion Battery *

A battery that you can charge using any USB port or phone charger and then forget about for the rest of the week gives you one less thing to worry about on race days.

* 75 hour battery life with backlight off

High-Speed, High-Capacity Data Logging

The ProStart records position, time, course over ground, speed over ground, magnetic heading and heel angle four times per second. The 8GB onboard flash memory is enough room for 1000 hours of sailing data.

Replay Anywhere

When you plug the new ProStart into any Mac, PC or Linux computer it shows up as an external drive with your track files on it. You can drag and drop these files into browser based replay software like ChartedSails or Njord Analytics, without having to install anything on your computer.
