

Windie360

Handheld Anemometer

The **Windie 360 handheld anemometer** is a must-have for any sailing enthusiast, particularly those involved in racing, kiteboarding, windsurfing or ski-kiting. This **professional** grade tool provides accurate and immediate wind speed data, which is key to excellent sailing performance. The Windie360 stands out with its **360-degree measurement** capability, meaning it doesn't need to be pointed directly into the wind, unlike some other devices. Its **one-hand usability** allows for multi-tasking, such as steadying yourself on the boat or holding other equipment. Designed for **durability**, the anemometer's sensitive internal system is protected by a robust cage of strong plastic bars making it a practical choice for sports where knocks and bangs are common. It also uses **easily replaceable AAA batteries**, a significant advantage over other devices that require more unusual battery types. The package includes a free fabric cover for storage. These features make the Windie360 a **reliable, accurate, durable, and easy-to-use wind measuring device** that will give you a professional edge.

360° ROTATION

Designed to measure all wind flow angles.

PRECISION

Get exact results anywhere and anytime.

ONE HAND

Outlined to fit precisely to the palm of your hand.
