

smartlink² Atto

Wireless Load Sensor

The Atto packs a punch for its size. At a mere 75g, it can measure up to 250kg of working load, making it ideal for dinghy and sportboat racing, as well as windsurfing and kitesurfing.

- Working load limit 250kg
- Sensor dimensions 68 x 79 x 15mm
- Sensor weight 75g
- It can be attached by pins, shackles or alternatively lashed to soft attachments. Max diameter 12mm.

With the Atto, sailors can tap into **dynamic live load data** and achieve **fast, repeatable settings** for tuning precision. This powerful sensor will **supercharge your results**, enabling meaningful, data-driven comparisons during two-boat tuning sessions. Its outstanding analytics provide every dinghy sailor with affordable access to highly accurate performance insights.

Seamlessly connecting with the **FREE Cyclops App** or streaming directly to Vakaros Atlas 2 the Atto ensures you're always in sync with your performance.

Supercharge your results with the Atto (patent pending), and experience precision like never before.
